Overview

AutoFlow Pro helps automate tasks between systems. It has triggers and actions.

Installation

1. Download the installer
2. Run it
3. Log in with your company email

Basic Usage

To make a workflow:

1. Click "New"
2. Pick a trigger (like "new email")
3. Add some actions
4. Save it

Note: Some actions need API keys. Ask IT if you get errors.

Known Issues

- Sometimes workflows don't run when they should
- The Gmail connector breaks after updates
- UI gets slow with 10+ workflows

For help, email support@company.com with your license key.
